

# Infrastructure

**During the construction and maintenance of infrastructure works such as bridges, tunnels and stations, specific challenges will often be faced. Difficult ground conditions, working while normal activities resume, large amounts of material and tight time schedules. Through years of experience in this field, BRAND® ensure that your project is carried out efficiently and safely.**

Our access solutions ensure optimum progress of the work, even for complex structures. By providing safe and effective scaffolding, lifts and other climbing equipment, we make the workplaces accessible. Calculating and drawing of complex issues is carried out by our engineering department and for large construction projects we work alongside our sister company Hünnebeck - experts in formwork and shoring.

During renovation and conservation work of bridges, it is essential that traffic is affected as little as possible by the work. We have extensive experience building special structures that make this possible. With lead times often being short and complicated, we prepare for these projects with accurate planning of installation and materials.

Working along motorways and railway networks have high quality and safety requirements. We work with the client and other contractors on risk management. Our technicians work in accordance with the guidelines for safe working on the track and have appropriate certification for this.

**more safety  
more productivity**
